

Species: *Pinus strobiformis*

(pye'nus stroh-bi-for'mis)

Southwestern White Pine

Cultivar Information

* See specific cultivar notes on next page.

Ornamental Characteristics

Size:

Height: up to 100' (narrower spread)

Leaves: Evergreen

Shape: pyramidal - conical

Ornamental Other: prefers sun

Environmental Characteristics

Light:

Hardy To Zone: Any

Soil Ph: Any

Environmental Other: evergreen; tightly clustered needles; often elegant texture

Insect Disease

generally insect problems are not chronic; possible problems may include dieback, rusts, blights, canker, aphids and more

Bare Root Transplanting

Any

Other

native from northern Mexico to southern Colorado; fast growing; care should be taken to purchase plants from the latitude where trees will be planted

Cultivars for *Pinus strobiformis*

Showing **1-5** of **5** items.

Cultivar Name	Notes
Coronado	'Coronado' - dwarf, broad upright form; bluish green, soft needles
Foxtail	'Foxtail' - compact pyramidal habit; needles are blue-green; needles taper and shoot tips, evoking a "fox-tail" look; grows to 7' tall x 3' wide in 10 years
Glauca Compacta	'Glauca Compacta' - columnar to pyramidal form; compact grower; slow growing; grows to 6' in 10 years; bluish-green needles; tolerant of poor, acidic soils, and drought; grows to 6 - 20' in 10-15 years
Loma Linda	'Loma Linda' - broad pyramidal form; soft and silver-blue foliage; grows to 6' tall x 3' wide in 10 years
Pendula	'Pendula' - main leader and weeping side branches; narrow when young, becoming more broad at maturity; silvery blue-green foliage; grows to 12' tall x 4' wide in 10 years
