

## Species: *Hippophae rhamnoides*

(hi-pof'ay-ee ram-noy'deez)

Sea Buckthorn; Common Sea Buckthorn

### Cultivar Information

\* See specific cultivar notes on next page.

### Ornamental Characteristics

Size: Shrub 4 to 8 feet, Shrub < 4 feet

Height: 8' - 15'; equal spread

Leaves: Deciduous

Shape: irregular, rounded

Ornamental Other: Full sun; grows well in seaside sites, for ornamental purposes, male plants/sterile cultivars('Spite') are best due to the potential for this species to become invasive

### Environmental Characteristics

Light: Full sun, Part shade

Hardy To Zone: 4a

Soil Ph: Can tolerate acid to alkaline soil (pH 5.0 to 8.0)

Salt Tolerance: Tolerates salt spray, Tolerates salty soil

Environmental Other: silver/green willowlike leaves; bright orange berries in winter add seasonal interest

### Insect Disease

No diseases listed

### Bare Root Transplanting

Any

## Other

Need ratio of 6 females to 1 male for pollination to ensure fruit production; Fruit cultivated for fruit production; Native to Europe - Northern and Western China

Cultivars for *Hippophae rhamnoides*

Showing **1-3** of **3** items.

Cultivar Name	Notes
Chuyskaya	Many female cultivars have been selected for fruit yield largely in Russia and northern Europe: 'Chuyskaya' - improved fruit yield 'Karima' - improved fruit yield 'Sprite' Dwarf male, fruitless
Karima	Many female cultivars have been selected for fruit yield largely in Russia and northern Europe: 'Chuyskaya' - improved fruit yield 'Karima' - improved fruit yield 'Sprite' Dwarf male, fruitless
Sprite	Many female cultivars have been selected for fruit yield largely in Russia and northern Europe: 'Chuyskaya' - improved fruit yield 'Karima' - improved fruit yield 'Sprite' Dwarf male, fruitless
