

Species: *Rubus occidentalis*

(rue'bus ok-sih-den-ta'lis)

Blackcap Raspberry

Cultivar Information

The few straight cultivars of this species are listed below. That said there are many hybrids of this species with *R. idaeus*. Essentially any of the agriculturally planted black or purple raspberries on the market have *R. occidentalis* as a parent. This plant is an aggressive native that produces delicious black fruits and is not susceptible to juglone (a growth inhibitor produced by *Juglans* species) unlike red raspberries.

* See specific cultivar notes on next page.

Ornamental Characteristics

Size: Shrub 4 to 8 feet

Height: 3' - 6' (to 10')

Leaves: Deciduous

Shape: suckering shrub

Ornamental Other:

Environmental Characteristics

Light: Full sun, Part shade

Hardy To Zone: 4a

Soil Ph: Can tolerate acid to alkaline soil (pH 5.0 to 8.0)

Environmental Other: thorns; edible fruit

Insect Disease

No diseases listed

Bare Root Transplanting

Any

Other

Native of Eastern N. America

Cultivars for *Rubus occidentalis*

Showing **1-3** of **3** items.

Cultivar Name	Notes
Bristol	'Bristol' - mid-season producer; excellent flavor; one berry crop each year is produced in early summer
Munger	'Munger' - fewer seeds than species; large, firm, juicy fruits; fruits ripen in August (later than species); self-pollinating
Jewel	'Jewel' - vigorous and erect form; large fruits with excellent flavor; fruits ripen early; canes are purplish red
